

Brewer 135DSS

Dynamic Saddle Stool

Benefits of a Saddle Stool

- **Better posture** as the vertebrae discs align naturally, resulting in immediate improved posture with less spinal muscle degeneration.
- **Tension relief** in the shoulder and neck area due to the improved positioning of the thoracic and cervical spine.
- **Deeper breathing** occurs due to the stretching of the torso allowing for better circulation, resulting in less fatigue.
- **Improved mobility and reach** is easily achieved as the legs are free to "scoot" around the operator, while remaining seated.

Why the Brewer 135DSS?

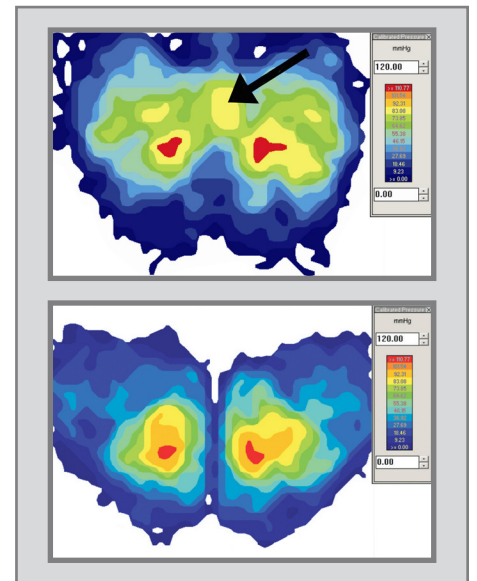

Circular movement and tilt:

- Unique 360° tilt makes movement easier and more natural.
- Allows core muscles to become active in supporting the spine.
- Strengthens spine stability muscles, pelvic and leg muscles.
- Less pressure on the edges of the upper legs when moving side to side.
- Easily adjusted to preference and comfort level.

Split Seat design:

- Improves lower body circulation with "no edge" design, and keeps the legs in the most open position for improved blood flow.
- Offers superior cooling comfort, resulting in improved reproductive health in both men and women.
- Balances the pelvis in an upright position, distributing the weight over the "sit bones" and not the soft tissues.
- Better hip abduction brings improved posture over narrower saddle seats.

Pressure mapping images clearly show the significant pressure relief provided by the patented Salli® Split-Saddle-Seat technology found in the Brewer 135DSS. (Top image is an ordinary saddle seat pressure map. Bottom image is the Dynamic Split Saddle Seat.)

	adjustable height range	shipping weight	seamless upholstery	recommended user height
135DSS	22.5" - 29.75"	28.4	Yes	5'3" - 5'11"
